# OUT OF THE BOX

## SYSTEMATIC RETURNABLE LOGISTICS

comepack is your professional partner in return logistics, container management, container management software, cleaning of small and large load carriers and pooling solutions.

The Polish branch of comepack is located in Rybnik. The strategic location allows us to easily meet the operational expectations of our clients.

### POOLING

Save valuable resources – we will take care of sorting, storage & picking. Your reusable containers are available to be called up flexibly and on short notice in our service centers at all times. We can also „pool“ your own empties. Call them up from our service centers cleaned or uncleaned on demand and return them to storage there.

### CLEANING

Our modern and environmentally-compatible cleaning facilities are the latest state of the art and specifically aligned with the cleaning of containers for small load carriers, trays and plastic pallets. Dust, grease, oil and other contamination is removed without residues. Pre-wash, main wash, drying and cleaning agents are adjusted to every single customer's needs.

### INTENSIVE CLEANING

Intensive cleaning prepares particularly badly contaminated load carriers for machine washing in the automatic container washing facility. Labels and stubborn dirt are manually removed from small load carriers, trays, lids and plastic pallets. Large load carriers are usually treated with high pressure and steam cleaners.

### REPAIR

Although plastic pallets and large load carriers are expensive, they are not exactly treated with kid gloves in logistics. Damage is a matter of time. Carriers often need to be sorted out and replaced. Our service centers offer a different option: Our repair techniques cover up to 70% of the damage patterns in such high quality that the carriers barely lose capacity. At the same time, repairs are up to 90% more cost-efficient than a new purchase.
